

Parenting, Patience, & Disability Study

Do you have a child with intellectual disabilities or autism who is 11 to 17 years old?

You are invited to participate in a first-of-its-kind research study exploring how parents experience and understand patience while raising children with developmental disabilities. Your insights will help us develop practical resources to support parents and caregivers as their children transition toward adulthood.

your voice & experiences matter

What will you do?

Participating parents will complete an online survey each spring over four years. The survey takes 45 minutes. It asks about your views and experiences related to parenting a child with disabilities. Compensation will be provided for your time and help

FAQ

- Each survey takes about 45 minutes.
- You will be asked to complete a survey once a year for four years.
- The survey will be available from around March to May each year from 2026 to 2029.
